Assignment

for

Junior frontend developer position

Please build a page in the software stack of your choice with the following requirements in mind:

1. Use data from https://randomuser.me/
2. Show users in a list
3. Add error handling when retrieving data fails
4. When clicking on the user in the list, show a user profile with more data than in the list view

Extra requirements:
5. Add sorting to the list
6. Add filtering on gender in the list view
7. Add tests
8. Implement performance improvements
9. Create a 100% Progressive Web App (check it with lighthouse)
10. Use [wave](https://wave.webaim.org/) to make your page more accessible

Notes
- Focus on functionality (design is extra)
- Make sure we can have a look at the assignment before the second interview
